

# V-Flags™

## Introducing our new cost-effective outdoor flag lineup

The V-Flag banner system is designed to be used indoors or outdoors in most weather conditions. The two unique shapes are designed to give you a variety of options to display your marketing message for events, tradeshow, promotional marketing and more. The V-Flag uses dye sub process and is available as a single- or double-sided banner.

This system has two mechanisms to handle wind: a bearing polypropylene bushing allowing the graphic to rotate out of the wind; but equally important is that the top baton section bends at the same time as the whole unit swivels out of the wind and therefore handles gusts from any direction very well. V-Flag is a simple, durable and effective banner system.
